

## A. Issues found

The draft is materially aligned with the approved privacy logic: it keeps the core points that POOOL processes affiliate-program data for onboarding, referral tracking, qualification, payout, compliance, fraud prevention, support, and governance; uses a minimum-data approach; limits access by role; and keeps data as long as reasonably needed.

The main issue is **surface mixing**. The file is not yet a clean final website layer because it still includes internal content-map instructions, operational/backend notes, rollout guidance, and open legal-review items alongside the public copy. That is useful as an internal workpack, but too broad for the final website/product copy set.

A second issue is **UX heaviness**. The onboarding layer currently uses four separate privacy checkboxes, which is more than most product flows need. The meaning is right, but the acceptance layer should be tighter and cleaner.

A third issue is **over-detailed internal phrasing in public copy**. Lines about internal review, incident handling, and rights limitations are correct, but some of that should sit in the full notice, help-center article, or request flow rather than being emphasized on general website surfaces.

## B. Missing or unclear points

The final website/product layer should separate more clearly between:

- public website copy,
- onboarding copy,
- dashboard/help copy,
- and privacy-request flow copy.

Right now all of them are present, but they are still packaged together like a working draft rather than a final production layer.

The public layer should also keep the rights wording and incident wording clearly marked as jurisdiction-sensitive, because the source draft itself flags those parts for legal review.

## C. Revised Website Copy Final

**Homepage short copy**

**Privacy built into the affiliate program.**

## **Homepage support copy**

POOOL uses affiliate-program data only for defined program purposes, including onboarding, referral tracking, qualification, payout handling, compliance, fraud prevention, support, and program administration.

## **Short website version**

**POOOL uses affiliate-program data to operate and protect the affiliate program. This may include onboarding, verification, referral, qualification, payout, compliance, fraud-prevention, support, and case-handling data. POOOL aims to limit access by role, keep data only as long as reasonably needed, and protect data through controlled security and incident-response processes.**

## **FAQ**

### **What data does POOOL process in the affiliate program?**

POOOL may process identity and profile data, onboarding and verification data, referral and attribution data, qualification and payout data, complaint or case data, and technical or audit-log data.

### **Why does POOOL process this data?**

POOOL uses affiliate-program data to review applications, onboard and verify affiliates, track referrals, determine qualified referrals, manage payouts and tax-related workflows, monitor compliance, prevent fraud or abuse, and handle complaints, disputes, and investigations.

### **Does POOOL collect more data than necessary?**

POOOL aims to process only the data reasonably necessary to operate, protect, review, pay, and govern the program.

### **Who can access affiliate-program data inside POOOL?**

Access is limited by role and operational need.

### **How long does POOOL keep affiliate-program data?**

POOOL keeps affiliate-program data for as long as reasonably needed for program, audit, legal, tax, fraud-prevention, complaint-handling, and compliance purposes.

### **Do affiliates have privacy-related rights?**

Depending on applicable law, affiliates may have rights regarding their personal data. These rights may be limited where legal, tax, fraud-prevention, complaint-handling, investigation, or record-preservation requirements apply. **[LEGAL REVIEW REQUIRED]**

### **How does POOOL protect affiliate-program data?**

POOOL aims to protect affiliate-program data through controlled access, secure handling practices, logging, and internal incident-response processes.

### **What happens if there is a data-related incident?**

If a relevant incident occurs, POOOL aims to assess and respond through its internal process and will take further steps where required by applicable law. **[LEGAL REVIEW REQUIRED]**

## **Onboarding flow**

### **Screen 1 — Privacy Notice**

This notice explains what affiliate-program data POOOL processes, why it is processed, how it is protected, and what controls may apply.

### **Screen 2 — What data may be processed**

POOOL may process identity and profile data, onboarding and verification data, referral and payout data, complaint or case data, and technical or audit-log data used to operate the affiliate program.

### **Screen 3 — Why this data is used**

POOOL uses affiliate-program data for onboarding, referral tracking, qualification, payouts, compliance, fraud prevention, support, and program administration.

### **Screen 4 — Access and retention**

POOOL aims to limit access by role and keep affiliate-program data only as long as reasonably needed for program, audit, legal, tax, fraud-prevention, or complaint-handling purposes.

### **Screen 5 — Security**

POOOL aims to protect affiliate-program data through controlled access, secure handling practices, and internal incident-response processes.

## **Checkbox text**

- **I acknowledge the POOOL Affiliate Privacy Notice.**
- **I understand that POOOL may process my affiliate-program data for onboarding, referral tracking, qualification, payout, compliance, fraud prevention, support, and program administration.**
- **I understand that I am responsible for providing accurate and current affiliate, payout, and tax profile information and for updating material changes through the approved process.**

## Tooltip text

- **Identity and profile data** — Basic affiliate identity, contact, and profile information used for the program.
- **Onboarding data** — Application, onboarding, training, and acceptance records used to manage affiliate participation.
- **Referral data** — Referral, attribution, qualification, and commission-related tracking data.
- **Payout data** — Payout and tax-profile data used for payout handling.
- **Complaint and case data** — Records used to review complaints, disputes, monitoring flags, or investigations.
- **Retention** — Affiliate-program data is kept for as long as reasonably needed for the purposes described in the notice.
- **Security** — POOOL aims to protect affiliate-program data through controlled access and secure handling.

## Error / warning messages

- **Please review the Affiliate Privacy Notice before continuing.**
- **You must acknowledge the Affiliate Privacy Notice before continuing.**
- **Please complete the required information so your privacy-related request can be reviewed.**
- **Some profile information may be out of date. Please review and update your details.**
- **Your payout or tax profile may need updating before further processing can continue.**
- **This request may require additional review before it can be completed.**

## D. Final legal-review flags only

1. Final rights-request wording and which specific rights should be named explicitly.
2. Final incident / breach wording and notification language.
3. Final entity / controller wording and privacy contact details.
4. Final retention wording by category or case type.
5. Final KYC-related wording if separate notice layering is needed.

## E. Readiness note for website, onboarding, and product implementation

This is ready for website, onboarding, dashboard, and help-center implementation review. The main remaining work is not structural; it is mostly cleanup: removing the internal content map and operational notes from the public-facing pack, slightly tightening the onboarding acceptance layer, and finalizing the jurisdiction-sensitive

privacy wording. The substantive privacy logic is already strong and consistent with the approved baseline and the underlying notice.
